CEREALBOX AGENCY · HOW THE AI SYSTEM WORKS

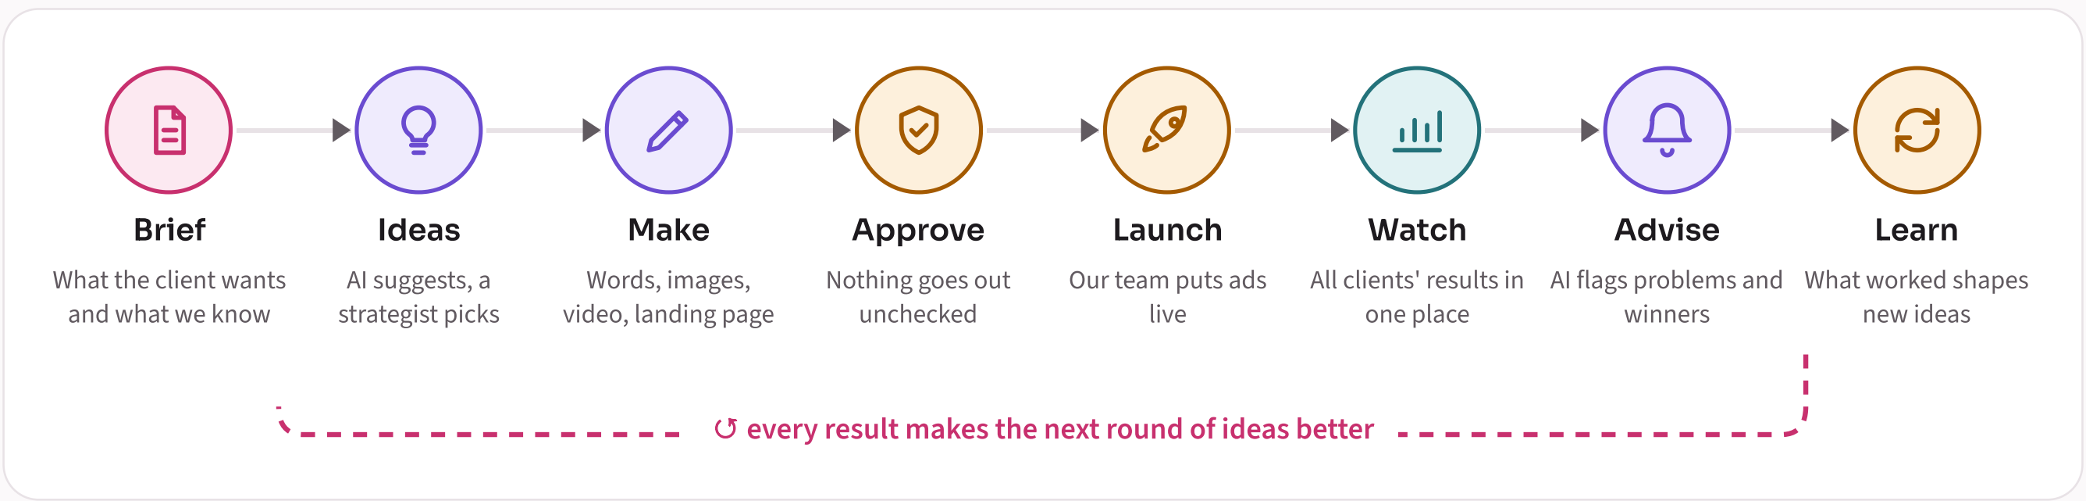
From a client brief to better ads, with people in charge at every step

Prepared by **Sohaib Ahmed** · November 2026

AI does the heavy lifting: first drafts, variations, number-crunching and spotting problems. People make the decisions: what's on-brand, what goes live and where money is spent. Every result feeds back in, so each campaign starts smarter than the last.

AI helps · A person decides · Automatic safety check

The whole loop at a glance



Brief — What the client wants and what we know

Ideas — AI suggests, a strategist picks

Make — Words, images, video, landing page

Approve — Nothing goes out unchecked

Launch — Our team puts ads live

Watch — All clients' results in one place

Advise — AI flags problems and winners

Learn — What worked shapes new ideas

↺ every result makes the next round of ideas better

Step by step, with one example

We follow one made-up campaign the whole way: **Harbour Lights Foundation's Winter Appeal**, asking people to give £10 a month to help young people facing homelessness.

1 Brief: capture what we know

The account team fills in one short form: who we're talking to, what's stopping them, the offer, and the facts we're allowed to use. The client's brand voice and the phrases they never want used are saved once and reused for every campaign.

Person
Writes the brief and lists the provable facts. AI can only use these facts.

Safety check
Required details must be filled in. Every change to the brief is saved as a new version.

> **Example:** Audience is past donors aged 30–60. Their worry: "my money disappears into admin." Fact we can use: "£25 funds one night of emergency accommodation." Never say: "100% of your donation."

2 Ideas: lots of directions, quickly

AI suggests several genuinely different campaign ideas. Each one comes at the problem from a different angle, so we don't get five versions of the same thought. Each idea arrives as a short creative brief with a headline thought, an opening line, a visual direction, a video idea and what we'd be testing.

AI
Drafts the ideas and scores each one on things like clarity, originality and brand fit, explaining every score.

Safety check
Flags made-up numbers, banned phrases and ideas too similar to ones we've already had.

Person
A strategist approves, rejects with a reason, or rates each idea. That feedback steers the next batch.

> **Example:** The AI offers "One Night, Counted" (show exactly what £25 pays for), a myth-buster about admin costs, and a day-in-the-life story told from a support worker's view. The strategist approves "One Night, Counted".

3 Make: one approved idea becomes everything we need

Once an idea is approved, the same thinking flows into each type of content, so the ad, the video and the landing page all tell the same story.

Ad words
- Writes several versions: opening lines, headlines, main text and a button
- Checks length limits, banned phrases and unproven claims
- Copywriter edits, asks for rewrites, approves

Image ads
- Creates the picture or scene
- The real logo and headline are added from a brand template, never drawn by AI
- Designer picks, polishes and approves

Video
- Writes the script scene by scene
- Chooses a real creator or an AI presenter
- First edit: cuts pauses, adds captions, logo and music, makes each size
- Editor fine-tunes and approves

Landing page
- Plans the sections and writes them, matching the ad
- No invented reviews, links work, works on phones
- Previewed and approved before publishing

> **Example:** The ad opens with "£25. One night. One safe bed." A 20-second video shows a support worker making up a bed. The landing page leads with the same line and a £10/month sign-up.

4 Approve: one place to sign things off

Everything waiting for a decision sits in one queue, next to its brief and safety-check notes. If someone edits an approved piece, it goes back into the queue, so nothing changes quietly after sign-off.

Person
Approves, rejects or asks for changes. Every decision is recorded with who made it and when.

Safety check
Anything with a serious problem, such as a banned phrase, can't be approved until it's fixed.

5 Launch: our team goes live

A media buyer takes the approved, ready-to-use pieces and sets the ads live. AI never launches, pauses or changes ads, and never touches budgets on its own.

6 Watch: every client's results in one dashboard

Each morning, results from every client's ad account are collected into one dashboard covering money spent, people reached, clicks, donations or sales, and cost per result. It can be filtered by client, campaign and date.

Safety check
Bad or duplicate rows are caught. Missing numbers show as "not available", never as zero.

AI
Writes a plain-English summary. Any figure it mentions is checked against the real data.

Person
An account manager reads it before anything goes to the client.

7 Advise: an assistant that never sleeps, but never acts alone

The ads assistant watches for things a busy team can miss: costs creeping up, an ad people are tired of seeing, a sudden spike in spend, an ad spending money with no results, or an ad doing unusually well. Each alert shows the exact numbers behind it and a suggested next step.

AI
Spots the pattern, explains it simply and suggests what to check.

Person
The media buyer accepts, rejects or dismisses each suggestion, then makes any change themselves.

> **Example:** "The £25 One Night ad costs about half as much per donation as the rest of the campaign this week." The media buyer accepts. Separately: "The night-shelter video is being seen too often and fewer people click." That flags a creative refresh.

8 Learn: results go back into the next ideas

When a person accepts a lesson like "showing exactly what money buys works for this audience", it's handed to the Idea Generator for that client. The next batch of ideas builds on what is actually working, and says so.

> **Example:** The next round for Harbour Lights opens with new ideas built around concrete, countable impact. The approved lesson is shown alongside them so the strategist can see why.

The nine AI helpers, each as its own flow

Each helper below is a small assembly line. Read left to right: what goes in, what AI does, what gets checked automatically, where a person decides, and what comes out.

AI helps · Automatic check · A person decides

1. Idea Generator

IN THE DEMO · The starting point for everything. Turns a brief into fresh campaign ideas.

- IN: Brief, brand rules and what worked last time →
- AI: Suggests 3–6 ideas, each from a different angle →
- AI: Scores each idea and explains why →
- CHECK: No made-up facts, no banned phrases, no repeats →
- PERSON: Strategist approves, rejects or rates →
- OUT: Approved idea goes to every maker

↺ Ratings and rejections teach the next batch

2. Copywriting

IN THE DEMO · Writes the words for the ad itself.

- IN: Approved idea, the offer and brand voice →
- AI: Writes several versions: opening line, headline, main text, button →
- CHECK: Right length for Facebook and Instagram, no unproven claims →
- PERSON: Copywriter edits or asks AI to rewrite one part →
- PERSON: Approves the final version →
- OUT: Ready-to-use ad words

↺ Any edit after approval sends it back for review

3. Image Ads

IN THE DEMO · Turns the idea and words into finished picture ads.

- IN: Approved idea and words, logo, photos →
- AI: Describes the visual and creates the scene →
- CHECK: Brand template adds the real logo and headline →
- CHECK: Right sizes, text readable, brand colours →
- PERSON: Designer picks, polishes and approves →
- OUT: Ads sized for feed, stories and reels

4. Script Writing

IN THE DEMO · Writes what will be said and shown in a video.

- IN: Approved idea, video length, who presents it →
- AI: Writes 3 opening hooks to choose from →
- AI: Writes it scene by scene: words, on-screen text, shots →
- CHECK: Fits the time, ends with a clear ask →
- PERSON: Creative lead approves before any filming →
- OUT: Shot list and script for filming

5. UGC-style Video

IN THE DEMO · PLAN ONLY · Turns an approved script into a creator-style video.

- IN: Approved script →
- PERSON: Chooses a real creator or an AI presenter →
- AI: Creates the presenter video and extra scenes, or the creator films →
- CHECK: Video fully finished, cost recorded →
- PERSON: Looks natural? Permission given? AI use disclosed? →
- OUT: Footage sent to editing

6. Video Editing

IN THE DEMO · PLAN ONLY · Does the first 80% of the edit so editors can focus on the craft.

- IN: Raw footage, script, logo, music →
- AI: Writes out everything that's said →
- AI: Cuts pauses and mistakes, picks the best takes →
- CHECK: Adds captions, logo and music, then makes each size and length →
- PERSON: Editor fine-tunes pacing and approves →
- OUT: Finished videos, originals kept safe

7. Landing Pages

IN THE DEMO · Builds the web page people land on after clicking the ad.

- IN: Approved idea and words, offer, brand style →
- AI: Plans the sections: headline, problem, offer, questions →
- AI: Writes each section to match the ad →
- CHECK: No fake reviews, links work, fast on phones →
- PERSON: Previews, edits, publishes →
- OUT: Live page with every version saved

8. Toast: results dashboard

IN THE DEMO · Brings every client's Facebook and Instagram ad results into one place.

- IN: Each client's ad results, collected every morning →
- CHECK: Removes bad and duplicate rows, marks gaps as "not available" →
- CHECK: Calculates spend, results, cost per result and trends →
- AI: Writes a plain-English summary, with every number double-checked →
- PERSON: Account manager reviews it →
- OUT: Dashboard and client report

9. Media Buyer assistant

IN THE DEMO · Watches running ads and says what needs attention. It advises and never acts on its own.

- IN: Daily results from the dashboard →
- CHECK: Spots rising costs, tired ads, spend spikes, wasted spend and winners →
- AI: Explains what happened, with the numbers, and suggests a next step →
- PERSON: Media buyer accepts, rejects or dismisses →
- PERSON: Makes any change in Facebook Ads Manager →
- OUT: Lessons sent back to the Idea Generator

↺ This closes the loop: results shape the next ideas

The AI tools we'd use, and why

No single AI is best at everything, so each job gets the tool that does it best. The system can switch a job to a better or cheaper tool at any time without rebuilding anything.

CAMPAIGN IDEAS
Claude Opus 5.5
Also: OpenAI GPT, for a second set of ideas
Thinks well about a long brief and the audience, and keeps to the brand's rules.

AD WORDS, SCRIPTS, LANDING PAGES
Claude Sonnet 5.5
Also: OpenAI GPT
Writes naturally in the brand's voice and sticks to the facts it's given.

QUICK CHECKS AND SUMMARIES
Claude Haiku 5.5
Also: smaller OpenAI models
Fast and inexpensive for the many small checks behind every piece.

PICTURES FOR IMAGE ADS
OpenAI image model or Google Imagen
Also: FLUX, a lower-cost open model
Creates the scene; our own template adds the real headline, button and logo so the words are always right.

PRESENTER VIDEOS
HeyGen + ElevenLabs
Also: Google Veo, Runway or Kling for extra scenes
Licensed presenters and natural voices. For fundraising, real people on camera stay the first choice.

VIDEO EDITING
OpenAI Whisper + editing automation
Also: Creatomate, Descript
Writes out every spoken word with timings, so captions and cuts are accurate.

AD RESULTS
Meta's own reporting connection (read-only)
Also: n8n for scheduling, Looker Studio for clients
Numbers are calculated exactly by the system; AI only explains them.

In today's demo the writing agents run on a free AI service (Ollama Cloud) so anyone can try it at no cost. Claude or OpenAI plug into the same slot. Check current versions and prices before choosing.

See it working: the demo

A working web app. You describe a campaign once and the AI builds the whole package in about half a minute. Then a person reviews everything in one place and approves it, asks for a new version with a note, or rejects it.

Idea Generator WORKING
Several different ideas, each scored with reasons. It picks the strongest and learns from your ratings and ad results.

Copywriting WORKING
Ad versions checked for made-up numbers, banned phrases and Facebook/Instagram length limits.

Image Ads WORKING
Real AI pictures turned into finished ads in square, portrait and Stories sizes, ready to download.

Script Writing WORKING
Opening hooks and a scene-by-scene script timed to 15, 30, 45 or 60 seconds.

UGC-style Video PLAN ONLY
A full production pack: presenter brief, shot list, consent and AI-disclosure notes. Video rendering connects later.

Video Editing PLAN ONLY
A complete edit plan: cuts, captions, extra footage, music and every export size. Rendering connects later.

Landing Pages WORKING
A page that matches the ad, previewed on desktop and mobile. Never published without approval.

Toast results WORKING
Imports Meta results, shows every client in one dashboard and writes a summary with every number checked.

Media Buyer WORKING
Spots problems and winning ads, explains them with the numbers, and never touches the ad account.

Also on every form: “Fill with AI”, which completes a form from the client's history, plus one-click suggestions for each field. AI settings choose how many ideas, versions and concepts to make.

What AI never does on its own

- Publish an ad, a video or a web page
- Change a budget, pause a campaign or edit targeting
- Invent statistics, reviews, testimonials or quotes
- Send anything to a client without a person reading it first

How we'd roll it out

First 2 weeks
Ideas, ad words and the results dashboard working on a few real briefs. These are quick wins that everything else builds on.

By day 30
Results collected automatically for every client each morning. Alerts sent to the team. Scripts and image ads added.

By day 60
Video editing help, landing pages and a first trial of AI-presented video.

By day 90
All nine areas connected into one loop, with costs and quality tracked per client.

What's next

Learn the real work
Spend time with the team and collect past briefs and winning ads, so every improvement is tested against real examples.

Connect the real data
Pull every client's Meta results automatically each night, with alerts sent to the team's chat.

Best AI for each job
Move writing to Claude, compare results with the team, and keep whatever performs best.

Finish the video steps
Connect presenter video and automatic editing for one pilot client first.

Prepared by Sohaib Ahmed for CerealBox Agency. Harbour Lights Foundation and all figures here are made-up examples for illustration. No real CerealBox client data or ad accounts were used.
